

At Goldshield, our vision is to provide products that create a safer world through microbial protection. The Goldshield antimicrobial solutions are comprised of an integrated system of compounds designed to bond to many surfaces. The products form an invisible antimicrobial coating that protects up to months at a time. Our Company believes its technology is significantly superior to existing antimicrobial agents. The patented Goldshield core formulation has many advantages over conventional antimicrobials or biocides, which themselves offer little to no residual protection. In addition, unlike competitors' products, Goldshield's solutions are not susceptible to microbial mutations.

GOLDSHIELD

CORE ANTIMICROBIAL

Next-Generation of Infection Control

- Unique, patented molecular assembly
- World's *first and only* water-stabilized antimicrobial formulation with a surface penetrating ingredient which provides for long-term *residual* protection
